Novel daunomycin derivs. (Ala)n-Daunomycin (n= 1-3) are obtained by 1 inking (Ala)n to the amino gp. of the drug mol. but to the reduced toxicity of the deriv. it is possible to administer dosages of ca. 5 to 40 times larger than daunomycin itself.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to ERA binding domain polypeptides (AAG99595-AAG9989 and AAW0001). The era gene in Escherichia coli codes for an essential Grase protein able to autophosphorylate at serine and/or threonina residues. The protein has potential antimicrobial and antibacterial activity and is useful in screening for antagonists, also useful in determining their noile in pathogenesis of infection, dystunction and disease and could be used as part of a vaccine and/or the therapy.
                                                                                                The invention provides diagnostic markers for a human disorder, comprising either opplate-like peptides or opiate-derived peptides. The novel peptides are used as diagnostic marker, in ex-vivo methods of diagnosing human disorders e.g. autism spectral disorders including autism pervasive developmental disorder, Aspergers syndrome, attention deficient disorder and attention hyperactivity disorder, and multiple sclerosis, parkinson's disease and Alzheimer's dementia. Sequences disorders specified diagnostic markers for the human disorders specified above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New ERA binding domain polypeptides and polynucleotides encoding them, useful as research reagents and materials for discovery of treatments and diagnostics for diseases, or for genetic immunisation \dot{}

```
It is a variant of C-myc protein. In the patent, myc protein in the host cell is stabilised by converting at least one amino acid to another amino acid, while not affecting the properties of the myc protein. The residue changed is the second one.
                                                                                    DNA-sequence encoding insulin precursor - having correctly positioned dissulphide bridges and resistant to proteolytic degradation
                                                                                                                                                 The biosynthetic insulin precursors are generated largely with correctly positioned disulphide bridges between the A- and B-moieties, and are more resistant to proteolytic degradation than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Myc protein for antibody prepn. - is stabilised by converting aminoacid(s) of myc protein to other aminoacid to produce variant type myc protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9.5%; Score 4; DB 10; Length 3; 100.0%; Pred.                                                                                                                                                                                                                                                                           The inventors claim double-stranded cDNA encoding AT and E.coli clones contg. AT-DNA. The CDNA is derived from mRNA extracted from human liver. Recombinant alpha-1-AT can be used for the treatment of pollutant-induced lung damage (esp. emphysema), particularly when caused by excessive release of proteolytic enzymes. Large amts. of AT can be made by cultivating the transformed bacteria.

The peptide and its salts inhibit angiotensin-converting enzyme (ACE) and are useful as antihypertensives. They may be administered orally, parenterally or rectally in the form of tablets, capsules, granules, powder, surp, suspension, suppositories, ointment, cream, gel, plaster, inhalation compsn. or injection at a dose of 0.001-1000, pref. 0.01-10, mg, 1-3 times per day.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The inventors claim recombinant penicillin acyltransferase (PAT) and DNA coding for PAT. PAT catalyses the last step in the biosynthesis of penicillin G and penicillin V. More specifically, the coding strand of the DNA has the nuclectide sequence shown below. This includes three introns and codes for a PAT protein with mol. wt. ca. 40kb. Plasmid vectors pBC2001 and pBC2002 are specifically claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant penicillin acyl-transferase - and DNA coding for it
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence of fragment 24, the tryptic fragment of recombinant penicillin acyltransferase (PAT) polypeptide 2.

```
Osteogenic proteins when in association with a matrix can induce at the locus of an implant the full development cascade of endochondral bone formation including vascularisation, mineralisation and bone marrow differentiation. They can also be used to repair both bone and cartilage in the treatment of osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New pure mammalian osteogenic proteins - induce cartilage and endochondral bone formation when in association with a matrix

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The peptides are specific inhibitors of protein kinase C isotype zeta, i.e. any subspecies of PKC which contains the specific autoinhibitory pseudosubstrate domain RRGARWRWK (Acc. No. ARR42573). This domain has been found to be perfectly conserved in zeta-PKC variants isolated from a number of different sources, including rat brain. The peptides are usefully therapeutically for treating conditions where the underlying actiology is associated with zeta-PKC, including tumours, hyperproliferative disorders (e.g. psoriasis) and viral infections (e.g. HIV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The main claim refers to new peptides of formula X-Ala-Arg-Arg-J in which X is H or one or more amino acids and J is OH or one or more amino acids, the peptides containing a total of 3 to 15 amino acids. The present peptide is a specifically claimed example of these new peptides.
                                                                                                                                                                                                                                                                           Zeta-protein kinase C inhibitor; zeta-PKC; pseudosubstrate; tumour; hyperproliferative disorders; psoriasis; viral infection; HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide(s) corresp. to the pseudo-substrate region of zeta-PKC · used for treatment of tumours, hyper-proliferative disorders and viral infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;

The sequences given in AAR46793-824 are peptides derived from the phytase protein. The phytase protein may be used in the composition of the invention. The DNA encoding the phytase protein may be introduced into a Trichoderma host which then expresses it and the protein is collected from the culture medium. By using Trichoderma as a host for Aspergillus phytate degrading enzymes such as this, a totally different enzyme composition compared to that secreted from Aspergillus results. The enzyme composition can be used for removal of phytic acid or inositol hexaphosphoric acid from raw material, particularly plant material. The composition is used in feed compositions for animals. By using Trichoderma as a source of a composition containing phytate degrading enzymes some difficult soundownstream processing problems, egg. filtration, that occur with similar Aspergillus compositions are avoided and yields are improved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pH 2.5; acid phosphatase, Trichoderma; host; Aspergillus; phytic acid; phytate degrading enzyme; PDE; removal; inositol hexaphosphoric acid; plant; feed composition; filtration.

Calcium ion channel; blocking peptide; hypotensive agent; blood pressure; therapy.
                                                                                                                                                                                                        The sequences given in AAR46793-824 are peptides derived from the phytase protein. The phytase protein may be used in the composition of the invention. The DNA encoding the phytase protein may be used into a Trichoderma host which then expresses it and the protein its collected from the culture medium. By using Trichoderma as a host for Aspergillus phytate degrading enzymes such as this, a cotally different enzyme composition compared to that secreted from Aspergillus results. The enzyme composition can be used for removal of phytic eard or inositol hexaphosphoric acid from raw material, particularly plant material. The composition is used in feed compositions for animals. By using Trichoderma as a source of a composition containing phytate degrading enzymes some difficult shownstream processing problems, eg. filtration, that occur with similar Aspergillus compositions are avoided and yields are improved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AARB5068 and AARB5069 represent calcium ion channel blocking peptides. This sequence corresponds to residues 10–13 of the peptide represented by AARB5068. The peptides suppress blood pressure by inhibiting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2, 1 28,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-816-737-13

Sequence 13, Application US/09816737

Sequence 13, Application US/09816737

Patent No. US20202037853A1

GENERAL INFORMATION:

TITLE OF INVENTION: "Synthetic Compounds and Compositions

TITLE OF INVENTION: "With Enhanced Cell Binding"

FILE REFERENCE: 06510235CN2

CURRENT APPLICATION NUMBER: US/09/816,737

CURRENT FILING DATE: 2001-03-23

PRIOR FILING DATE: 1999-06-08

PRIOR PILING DATE: 1999-06-07

PRIOR PILING DATE: 1999-08-10

PRIOR FILING DATE: 1991-12-09

PRIOR FILING DATE: 1991-12-09

PRIOR FILING DATE: 1999-08-14

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence 34, A Sequence 45, A Sequence 45, A Sequence 45, A Sequence 46, A Sequence 11, A Sequence 115, Sequence 115, Sequence 116, Sequence 116, A Sequence 116, A Sequence 116, A Sequence 11, A Sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 25, Sequence 27, Sequence 27,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alternate names: glucosmylase (EC 3.2.1.3) - Aspergillus phoenicis (fragment)
Alternate names: glucoamylase
Specias: Aspergillus phoenicis
Date: 16-Aug-1988 #sequence_revision 16-Aug-1988 #text_change 06-Dec-1996
C.Accession: A27897
B.Iochem. 90, 1055-1067, 1981
A.Title: Purification and characterization of a minor glucoamylase from Aspergillus sait
A.Reference number: A27897, MUID:82075730; PMID:6796572
A.Reference number: A27897
A.Molecule type: protein
A.Molecule type: protein
A.Molecule type: protein
A.Molecule type: glycosidase; hydrolase; polysaccharide degradation
